- Energy Profile Hourly
- Max and Minimum Demand
- Analysis and Evaluation Report
- Load Factor
- Average Energy -Day Of Week Report
- Load Duration
- Daily Comparisons
- Monthly Calendar Display of Daily Data

SIMMARIX – Energy Analysis

The following outlines some of the types of services and reporting that is available to the end use customer. These reports are delivered via the internet and are available on a 24 by 7 basis. The services are typically grouped packages but special arrangements can be made to tailor the service package and reports to the customer's specific requirements. All reports are communicated in an easy to understand format so that managers can take the steps necessary to manage the energy and costs.

Energy Related Reports:

- Total energy used at each site during a given time period.
- Total peak demand for each site for a given time period.
- Energy summarized by settlement zones and wire service providers.
- Energy summarized by type of business and/or location.
- Verification of metered information collected by wire owner and/or provided to the ISO and utility retailer

Utilities can also offer to their customers the full suite of web information services being offered to end use customers. SIMMARIX will enter into a wholesaler/supplier arrangement with the utility to make this possible. The utility can provide the front end customer contact and sales activities while marking up the service. The following outlines some of the metering services offered to electric utilities. Services can be tailored to meet the exact needs of your utility.

- Cost effective interval meter data collection, validation and storage.
- Summarization of metered data information.
- Reporting of required data to ISOs and other stakeholders.
- Load profile calculations and reporting.
- Data transfer to customer information systems.
- Calculation of billable amounts.
- Special analysis and reporting.
